DEQ IR TMDL Approach Update 20130314 rm + epf.docx

Hi

Attached is the latest version. I accepted some of Ryan's comments. A couple of reasons why I did not accept all of them:

Even tho redundant, I want to overemphasize that we are using local data and information and we are using the TWG (and to a lesser extent the LSAC) to review local data and information and that we are using them to advise us with development and implementation.

Given the issues we have had with the Sediment TMDL and CZARA management measures, this can not be overemphasized enough, so I decided to leave the redundancy in the document

Bacteria TMDL development has been going well, I don't want it to get bogged down with the sediment TMDL, but I did add some language about us continuing to develop the bacteria TMDL but will need some additional language from Kevin when he gets back on Monday

Let me know if there is anything glaring

thanks

Gene

Attached is the current version for my memo update to the LSAC and TWG members

please edit in track changes

thanks

Gene
